### **Winterising Pools what does this mean?**

Winterising the pool with Zed Zed 60 means that the pool does not have to be drained as in Option one.

A traditional method of cleaning the pool after winter months involves one or both the two options listed below.

#### **Option One:-**

Drain pool.  
Scrub walls and pressure wash  
Refill and chlorinate to regulations.

#### **Option Two:-**

Shock and Floc after winter:-  
Add chlorine to pool as chlorine must be >6 ppm to kill algae  
Add flocculant  
Vacuum to waste all dead algae and particles.

#### **Both options One and Two:-**

**Waste water.**

**Use excessive chemical – raises the cost of chemicals used.**

**Increase hours and labour of pool operator.**

#### **Winterising Pool with Zed Zed 60:-**

Add Zed Zed 60 according to recommended dose rate. For example a 50,000 ltr pool would require:-

##### **Clean Pool.**

Start up dose of 800ml  
Monthly dose of 400ml.

##### **Existing Algae problems:-**

Start up dose of 1.6 ltr  
7 day dose of 400ml  
Monthly dose of 400ml

It is recommended that the filter is run 4-8 hours each week during the winterising program.

- Note a Shock and Floc program is recommended on the start up of a commercial facility.
- Zed Zed 60 will eliminate algae problems not bacterial problems.

CHEMICALS

My docs: Poolkare: Pool maintenance sheets "winterising with Zed Zed 60 6.2.07"

- Benefits of using Zed Zed 60:
- Water does not need to be drained therefore pool levels of pH, Alkalinity, cyanuric acid and Calcium hardness would not be lost.
- Reduce additional chemical usage required on start up of pool after winter, ie the additions of sodium bicarb, cyanuric acid and calcium chloride.
